Subject: MPTS – Power Conditioning Energy Savers

This is to inform you that the trial MPTS 100 Unit installed in April 2012 on the 40 Ton roof top unit saved over $6,000 in the electricity costs from May to September that year at our Viewpoint Building on East Bethany Drive in Aurora. We had a hotter than normal summer and instead of the electric bill going up by an expected $5,000 or more in the summer months, we saw a decrease, making the total savings at least $11,000 including the cost avoidance.

We want to thank you for proposing and installing the additional MPTS units at the Viewpoint location in 2013. We were able to fund the purchase of 4 air-conditioning units with the energy savings from the MPTS.

Every year due to power outages or surges we would have compressor failures that would dip into our emergency funds for repairs or replacements at a cost of $10,000 or more each time. With the MPTS units in place we have not lost a single compressor in two summers.

As you are aware, we have over 20 buildings in Aurora. Can you arrange to audit these locations? We would like you to submit a proposal to install MPTS units in suitable applications not only for energy savings but also to protect our investment in mechanical and electrical equipment.

We want to mention again that your drive, enthusiasm and ideas have made an impact on our bottom line. We sincerely appreciate your efforts to make our organization energy efficient.

Sincerely,

Dan Dawson
Chief Financial Officer
